IMPORTANT NOTE : This is a “universal” kit, intended for our “do-it-yourself” customer base. As such, the instructions provided are very basic and pertain specifically to the proper use of the items included in the kit. Post sale customer support for this product is limited to ensuring that all of the included components are present, and working as intended. **Driven Diesel does not have the manpower to offer system design and troubleshooting services for this product line. If you need that level of support, we recommend that you purchase a complete Driven Diesel fuel system kit.**

Customers that are using this product to build a system “similar to” those offered by Driven Diesel are free to download the full PDF instruction documents for those kits, as well as use the technical support and design articles we have posted online.

While this filter head was originally designed for use as a diesel fuel filter, using the Baldwin BF1212, BF1252 and BF7633 filters, there are other filters that will fit. The head uses a 1"-14 thread pitch nipple, and is compatible with either the G381-A or G401 gasket spec from Baldwin. We can't help you with filter selection outside of what we have tested and have direct knowledge about, but any filter that could be used with a Baldwin FB1311 or WIX 4770 filter head will work with this one.

Typical installations will use (1) IN and (1) OUT port. Once you determine which ports will be used, the (5) included plugs can be installed in the remaining ports. It is always best to apply a light lubricant on the o-rings before installation, so they don't tear when being tightened. See Figure 1.

The filter head attaches over the (5) studs on the bracket and is secured with (1) flat washer and (1) nylok nut on each stud. Select a section of the vehicle frame that is 7-3/4" tall (or less). Insert the (2) 4" bolts, with flat washers, into the top holes of the filter bracket, and route those bolts OVER the top of the frame. From the other side, install the back plate over the (2) bolts and secure with flat washers and nylok nuts. Install the short bolt in the bottom hole of the brackets (routed UNDER the frame) and secure with washers and nylok nuts. Tighten the mounting hardware to secure, but not so tight it bends the brackets. See Figure 2.
